The Omnichair – world’s most maneuverable wheelchair

The newly invented Omnichair gives its owner a unique freedom. Driving an Omnichair feels like ballet in an electrical wheelchair. With this wheelchair it is possible to move completely freely around apartments, workplaces or in large groups of people, because this chair needs around 30% less maneuvering space. The Omnichair is built by Omniroll, a high-tech company from Switzerland.

- Sideways, diagonally, on the spot – every movement is possible
- No more getting stuck in corners or back-and-forth movements
- 30% less maneuvering surface compared to usual electric wheelchairs
- Use living and work spaces optimally – without conversions
- Driving an Omnichair is like ballet in an electrical wheelchair
- Price: USD 26,675.00 (excluding transport)

Joystick: The Joystick makes whatever you want. Move it to the right, the Omnichair goes right, moved it diagonally forward and left, the Omnichair makes the same movement. And if you turn the head of the joystick only, the Omnichair will turn on the spot itself.

Touchscreen: All other functions can be managed on touchscreen: electrically lower able back- and footrests and retractable armrests, speed, lights, blinkers, emergency brake or maximum speed pre-selection and many more.

Space: Omnichair needs around 30% less maneuvering space

Design: The plastic body is snappy and modern and covers the technology of the chair. Motors, cables, batteries or chassis aren’t visible at all. The Omnichair can be ordered in any color and even water-transfer printing is offered. Also bag carriers and other accessories can be mounted on request.

Ramp: The Omnichair doesn’t need a special ramp or lading equipment. The chair can be loaded into a car easily with common ramps used for other wheelchairs. But the grade should not be more than 18°.

maximum range was measured under test conditions. Weight, terrain and weather conditions can influence it in everyday settings.

Technical Data

Unladed weight (incl. batteries)	330 lbs
max. total weight incl. load	661 lbs
Speed max.	6 m/h
Batteries	lead gel battery (charges 800 - 1000 times)
Drive range	24.8 miles
Total width	26.8 inches
Seat width	25.6 inches
Total height	48.42 inches 31.50 inches when backrest folded
Total length (incl. footrest)	49.2 inches
Electrically folding backrest	✓
Electrically adjustable footrest height	✓
Adjustable armrest height	✓
Colors	red, black, white and other colors or water-transfer printing

Hard Facts
